

### **ilities Table**

Attribute	Importance	Why? /How?
Usability	3	This project is built for end-user consumption. Bank officers, students, and counselors all need to be able to find and select anything they want properly and efficiently.
Reliability	3	It is essential for the system to send loan requests, approvals, and other transactions properly and on time, every time.
Performance	1	While the webpage needs to be useable, we are not worried about average wait times
Supportability	3	Once implemented properly, support after deployment is important. We need to make sure the end users can do whatever they need to with the loans.
Security	3	It is important that the users know that their PII is safe, and that the sensitive info is not open to public.
Safety	1	N/A
Availability	2	While it is important that students need to be able to apply at any time, a few hours or even a day of downtime is not a huge issue
Maintainability	2	Being able to add features is important, but the likelihood of new features is low. Bugs will be prioritized to fix anyways.
